TITLE: Waveguide Attenuator, Type OF 4.5

PERIODICAL: Przegląd Telekomunikacyjny, 1959, No. 10/11, p. 325, Supplement;  
Biuletyn Przemysłowego Instytutu Telekomunikacji, 1959, No. 4

TEXT: The article describes the OF 4.5 waveguide attenuator, designed by the Industrial Telecommunications Institute for use chiefly in measuring standing wave coefficients in microwave systems. Measurement is effected by heat generated by reflected waves in a lamina covered with colloidal graphite and placed along the axis of the waveguide. Basic characteristics: frequency response: 5.85 - 8.20 kmc (i.e., 5.12 - 3.66 cm); standing wave coefficient: < 1.05; mean current: < 2 w; weight: approximately 0.35 kg; outside dimensions: 167 x 60 x 40 mm; inside dimensions: 34.85 x 15.80 mm. The instrument is produced on special order, which must be addressed to the Experimental Laboratory of the Industrial Telecommunications Institute, Warsaw 26, 30 Poligonowa St. There are: 1 set of diagrams and 1 photo.

TITLE: Ferrite devices for the 3-cm microwave band

SOURCE: Przegląd telekomunikacyjny, no. 12, 1964, 341-349

TOPIC TAGS: microwave, microwave component, iron compound, ferromagnetic material, communication equipment

Abstract: The article reviews three basic phenomena which are utilized in the design and construction of microwave devices: 1) the Faraday-rotation of the plane of polarization, 2) the irreversible phase shift in a wave-guide with a transversely magnetized ferrite, and 3) the gyro-magnetic resonance. Existing ferrite devices for microwave application are classified and two of the irreversible types are described in detail; these are isolators and circulators. A total of ten models designed and built by UNIPAN are shown together with their outstanding features, performance characteristics and other technical data. In addition, some important application problems are discussed. Thus, the ferrite isolator provides the most

Card 1/2

L 48281-65

ACCESSION NR: AP5014090

advantageous method for protecting a microwave generator against detrimental effects of load changes. The ferrite circulator can be used for the same purpose and also as an efficient switching device in transmitter-receiver systems with a common antenna, or for separating signals in receivers operating on several frequencies at the same time. Orig. art. has 28 figures and 5 tables.

TITLE: Dual-mode wide-band tee in a circular waveguide

SOURCE: Przegląd telekomunikacyjny, no. 3, 1965, 71-73

TOPIC TAGS: circular waveguide, electric impedance, electric inductance, transformer, frequency band

41  
B

ABSTRACT: The article describes a dual-mode tee with wide-band matching characteristics for a circular waveguide. Of the two basic parameters, namely the isolation of both modes of the  $H_{11}$  wave and wideband matching, the latter is discussed in greater detail. A new method is presented which utilizes the orthogonality of both modes of the wave. Experimental results are shown in the form of input impedance diagrams for the 8.6-10.0 Gc frequency range. An impedance transformer and an inductance diaphragm in the vertical branch of the tee, a matching disk placed at the bottom along the branch axis are all that is needed; this design can be adapted to any frequency band. Orig. art. has: 9 figures. [JPRS]

TITLE: The rotary-vane attenuator, a primary attenuation standard for the microwave range

SOURCE: Przegląd elektroniki, no. 11, 1965, 534-548

TOPIC TAGS: microwave attenuator, waveguide element, electromagnetic wave absorption, circular waveguide, rectangular waveguide

ABSTRACT: A description is given for the absorptive waveguide attenuator shown in the figure. This rotary-vane attenuator consists of three sections of circular waveguide 5, 6, and 7 and two input stubs 3 and 4 for transition from rectangular to circular waveguide sections. In the circular waveguide sections are installed close-fitting absorption plates 8, 9, and 10 which are lined up in the zero position. The middle waveguide section 6 has a readout scale and may be rotated with respect to the two end sections. A wave entering the first fixed section of circular waveguide 5 from 1 is perpendicular to absorption plate 8 and therefore passes with very little attenuation. In the middle section 6 where the plate is set at an angle  $\alpha$  to the end sections 5 and 7, the

TITLE: Measurement of microwave attenuation *gm*

SOURCE: Przegląd elektroniki, no. 3, 1966, 147-153

TOPIC TAGS: microwave attenuator, microwave technology, electronic measurement

ABSTRACT: A unit for the measurement of microwave attenuation by substitution of standard 1f attenuation is described. It was developed and tested at the Establishment for the Experimental Construction of Scientific Instruments of the Polish Academy of Sciences in Warsaw. A block diagram is shown in the figure. The input signal from a stabilized microwave generator is divided between main and auxiliary channels, with the larger portion of power transmitted through the former. Signals at the ends of the channels are passed to a crystal diode mixer. The auxiliary channel contains an amplitude modulator and the investigated element. The magnitude of the modulated mixer output signal is proportional to that of the auxiliary channel. The mixer signal is compared to the signal produced by the modulating oscillator through the 1f standard attenuator. A zero indicator makes it possible to establish

TITLE: A wide-band transformer for connection between circular and rectangular waveguides

SOURCE: Archiwum elektrotechniki, v. 14, no. 3, 1965, 597-603

TOPIC TAGS: circular waveguide, waveguide coupler, rectangular waveguide, electric impedance, ~~Tschebyshev~~ polynomial

ABSTRACT: Fundamental relationships and curves are given for design of a wide-band combination mode transducer and impedance transformer for matching a rectangular waveguide with an H<sub>10</sub> wave to a circular waveguide with an H<sub>11</sub> wave. Truncated circular waveguide sections are used in the device with linear dimensions equal to 1/4 the wavelength in the waveguide. The wave impedance in each of these sections is proportional to the coefficients in the Tschebyshev polynomials. Experimental data are given from tests of a four-step X-band transformer designed for connecting a standard FP22x10 waveguide (22.86x10.16 mm) to a circular waveguide measuring 26.8 mm in diameter. The

TITLE: A floating vibration gyroscope. Class 42, No. 182345

SOURCE: Izobreteniya, promyshlennyye obratzys, tovarnyye znaki, no. 11, 1966, 77-78

TOPIC TAGS: gyroscope system, torsional vibration

ABSTRACT: This Author's Certificate introduces a floating vibration gyroscope containing a sensing element which consists of masses oscillating at resonance frequency in phase opposition. These masses are suspended in the housing on elastic torsional supports. The unit also contains a device for signal takeoff. The sensitivity of the gyroscope to the rate of angular motion of the housing is increased by making the sensing element in the form of an airtight float suspended in a liquid with inertial masses inside.

rotate at a varying velocity, a corresponding modulation of the high-frequency sensed signal will appear. The carrier and modulation frequencies are separated in discriminator (8), after which the carrier signal is detected and the modulation signal is differentiated. The resulting signals are proportional respectively to the velocity of the float about the X-axis and the gyro case about the float, hence their sum yields the net platform velocity about the X-axis. From the motion equations for the system the authors show that the pickup sensitivity is a direct function of the applied vibrational frequency, and therefore can be designed to a desired level. This feature is cited as an advantage over the earlier Sperry vibrational gyro. Orig. art. has: 1 figure and 7 formulas. [SH]

TITLE: A radial-piston hydraulic engine. Class 47, No. 177726 [announced by All-Union Scientific Research Institute of Building and Road Construction Machinery (Vsesoyuznyy nauchno-issledovatel'skiy institut stroitel'nogo i dorozhnogo mashinostroyeniya)]

SOURCE: Izobreteniya, promyshlennyye obraztsy, tovarnyye znaki, no. 1, 1966, 122

TOPIC TAGS: bushing, shaft, hydraulic device, piston engine

ABSTRACT: This Author Certificate presents a radial-piston hydraulic engine containing a stator with a profiled inner surface, a rotor (in the radial hollows of which pistons are placed), a radially positioned journal distributor of the working fluid with two systems of longitudinal channels for delivery and removal of the working fluid, and a cover attached to the stator with channels for delivery and removal of the working fluid. To increase the operating reliability of the hydraulic engine by complete removal of lateral retarding forces from the distributor, the systems of longitudinal channels of the distributor are arranged symmetrically about its axis and are coupled, correspondingly, with an annular port and a diametral channel

UDC: 621.225

Card 1/2

L 04254-67

ACC NR: AP6005378

made in different planes in the shaft of the distributor. A bushing with two diametral channels (which coincide with the annular port and the diametral channel of the distributor) is mounted on the shaft of the distributor. The outer surface of this bushing has four bare spots perpendicular to the axis of each diametral channel. The channels of the cover for delivery and removal of the working fluid are diametrically coupled and coincide with the diametral channels of the bushing. In each channel of the cover is a fixed cup with a convex spherical end, clamped by a spring centered in this cup to a disk with a concave spherical end, which is clamped by the opposite flat end to the bare spot on the bushing.

Sluchay ostroy luchevoy bolezni u cheloveka (A Case of Acute Radiation Sickness in Man) Moscow, Medgiz, 1962. 149 p. 10,000 copies printed.

Ed. (Title page): N. A. Kurshakov, Corresponding Member Academy of Medical Sciences USSR, Professor; Ed.: S. P. Landau-Tylkina; Tech. Ed.: N. A. Yakovleva.

PURPOSE: This monograph is intended for physicians and biologists.

COVERAGE: This book describes an actual case of acute radiation sickness in its severe form. It describes in detail clinical symptoms, changes in biochemical indexes, morphological changes in the nervous system, and the distribution of depth doses and energy absorption.

TITLE: The possibility of eliminating greasing in longitudinal launching of ships from inclined building slips

SOURCE: Sudostroyeniye, no. 10, 1965, 43-46

TOPIC TAGS: ship construction, ship building/ ShKh15 steel 6

ABSTRACT: A new method for launching ships from inclined building slips is presented. After a discussion of possible use of solid lubricants such as teflon on the ways, these materials are discarded as impractical because of high friction coefficients. Ball and roller type cradles used by the Japanese since 1947, by the British since 1961, and (improved) by the Germans in 1962 have disadvantages such as jamming of rollers and loss of part of the balls and rollers into the harbor during launching. The authors present a new type of cradle (as per Author Certificate No. 165387, 8/V, 1964) which has the balls guided by flexible steel separators (see Fig. 1). The 90-mm diameter steel balls (ShKh15 steel) have a 2.5-ton load capacity with a 5--6 fold overload capability. The balls are placed at constant intervals of 250 mm in two (for ships weighing < 300 tons), three (7000-8000 tons), or more (> 8000 tons) rows. Calculations performed for several ship-building yards showed that modification costs

for the building slips (addition of steel races) would be recovered in 5--6 years and that elimination of the old method would save about 30 000 rubles annually. Tests have been performed with 1/6th scale models of the cradles. A friction coefficient of 0.025--0.029 was common, and the performance was excellent. These cradles could also be used for lateral ship launching or horizontal moving of large loads. Orig. art. has 4 figures and 1 table.

TITLE: Rhenium in Molybdenites of the Tyrny-Auz Deposit  
(Reniyy v molibdenitakh mestorozhdeniya Tyrny-Auz)

PERIODICAL: *Geokhimiya*, 1958, No 1, pp. 31-39 (USSR)

ABSTRACT: Rhenium is extremely dispersed; the data of I. and W. Moddack are given in table 1. A certain concentration takes place in the molybdenites as rhenium is closely related to molybdenum as to its chemical properties and its ionic radius (0,68 Å). The contents of rhenium of different deposits of molybdenites in the world are given in table 2, the data of Soviet deposits are given in table 3.

The authors investigated the molybdenites of Tyrny-Auz. Rhenium was extracted with mercury as a reducing agent and potassium thiocyanate in ether, and was determined colorimetrically in 2-n-hydrochloric acid as a thiocyanate complex in the presence of tin(II)chloride as a reducing agent. This method, as worked out by A. N. Grunina (reference 5), has an exactitude of 10% and a sensitivity of 0,1  $\mu$ /l.

Table 4 shows the contents of rhenium of 72 investigated molybdenite samples. According to their paragenesis the

Card 1/3

## Rhenium in Molybdenites of the Tyrny-Auz Deposit

7-1-8/12

samples can be classified as follows (the average rhenium contents are given in brackets): Molybdenites from

- 1) Skarns ( $3,99 \cdot 10^{-4}\%$ )
- 2) Leucocratic granites ( $1 \cdot 10^{-5}\%$ )
- 3) Quartz veins a) in biotite hornblende rock ( $3,47 \cdot 10^{-4}\%$ )  
b) in leucocratic granites ( $1,8 \cdot 10^{-4}\%$ )  
c) in skarns ( $2,68 \cdot 10^{-4}\%$ )
- 4) Quartz-feldspar veins ( $2,19 \cdot 10^{-4}\%$ )
- 5) Skarn veins ( $3,36 \cdot 10^{-4}\%$ )
- 6) Quartz-garnet veins ( $3,65 \cdot 10^{-4}\%$ )

Thus the average contents of rhenium in the Tyrny-Auz type of molybdenites is  $3,23 \cdot 10^{-4}\%$  according to all the data. Moreover is shown:

- 1) The smallest contents of rhenium are found in molybdenites which are either dispersed or veins in leucocratic granites.
- 2) The highest concentration of rhenium is found in molybdenites from quartz-garnet veins in the skarn. Among these the molybdenites of augite-vesuvian-wollastonite skarns are leading. There are 5 tables and 5 references, 4 of which are Slavic.
